10/2010

La serie APS comprende riduttori costruiti appositamente per soddisfare delle specifiche esigenze di automazione. Il cinematismo, composto da una vite senza fine e due corone, consente di disporre, all'uscita, di due alberi cavi con una rotazione sincrona controrotante. La motorizzazione può essere effettuata tramite motori elettrici o motorvariatori provvisti di una flangia di fissaggio dimensionata a norme IEC.

APS series includes gearboxes specially manufactured in order to comply with specific requirements. The kinematic motion is carried out by means of a wormshaft and two worm-wheels in order to have two output shafts with a synchronous rotation. These gearboxes can be assembled to electric motors or motorvariators equipped with a fixing flange with dimensions conforming to IEC specifications.

APS series includes gearboxes specially manufactured in order to comply with specific requirements. The kinematic motion is carried out by means of a wormshaft and two worm-wheels in order to have two output shafts with a synchronous rotation. These gearboxes can be assembled to electric motors or motorvariators equipped with a fixing flange with dimensions conforming to IEC specifications.

6.1 Caratteristiche

- **Corpo e flange**
Costruiti in alluminio e verniciati colore BLU RAL 5010
- **Vite senza fine**
In acciaio legato. Indurita tramite cementazione e tempra e finita di rettifica
- **Corona**
Fascia dentata in bronzo GcuSn12 UNI 7013 riportata di fusione su mozzo in ghisa G20 UNI 5007
- **Cuscinetti**
Sulla vite e sulle due uscite sono montati cuscinetti a rulli conici
- **Lubrificazione**
Normalmente i riduttori vengono forniti privi di lubrificante. Su richiesta possono essere forniti con lubrificante sintetico

6.1 Characteristics

- **Casing and flanges**
Made from aluminium and painted BLUE RAL 5010
- **Worm screw**
Made from alloy steel. Hardened and case-hardened then finished by grinding
- **Worm wheel**
UNI 7013 GcuSn12 bronze toothed band. Inserted by casting on UNI 5007 G20 cast-iron hub.
- **Bearings**
Taper roller bearings are mounted on the screw and on the two outputs
- **Lubrication**
Gearboxes are normally supplied without lubricant. However, they can be supplied with synthetic lubricant on request

6.1 Merkmale

- **Gehäuse und Flansche**
Aus Aluminium gefertigt und mit Farbe BLAU RAL 5010 lackiert
- **Schnecke**
Aus legiertem Stahl. Gehärtet durch Einsatzhärtung und Abschreckhärtung mit Fertigschliff
- **Zahnkranz**
Zahnband aus Bronze GcuSn 12 UNI 7013, aufgegossen auf Nabe aus Guss-eisen G20 UNI 5007
- **Lager**
Auf der Schnecke und auf den beiden Abtrieben werden Kegelrollenlager montiert.
- **Schmierung**
Normalerweise werden die Getriebe ohne Schmiermittel geliefert. Auf Anfrage können sie mit synthetischem Schmiermittel geliefert werden

La coppia T_2 è riferita a ciascuna uscita. T_2 torque refers to each output

 T_2 bezieht sich auf jedes Abtrieb

6.4 Lubrificazione

Normalmente i riduttori vengono forniti privi di lubrificante. I tappi sono predisposti come da disegno.

6.4 Lubrication

The gearboxes are normally supplied without lubricant. The filler plugs are arranged as shown in the drawing.

6.4 Schmierung

Normalerweise werden die Getriebe ohne Schmiermittel geliefert. Die Anbringung der Füllstopfen entspricht der Zeichnung.

Tipo / Size / Typ	Olio / Oil / Öl [l]
135	0.7
150	1.1
170	1.3
230	3.1

6.5 Carichi radiali e assiali

Nella tabella sono indicati i valori, espressi in N, dei carichi radiali e assiali ammissibili su ogni singola uscita. Il carico radiale F_{r2} si considera applicato ad una distanza dalla battuta dell'albero cavo pari al valore del diametro. I valori indicati hanno come limite la struttura del riduttore, perciò non variano al diminuire della velocità, cosa che normalmente avviene quando il limite è riferito ai cuscinetti.

6.5 Radial and axial loads

In the table, the permissible radial and axial loads for each individual output are shown as N. The radial load F_{r2} should be considered as applied at a distance from the shaft shoulder equal to the diameter figure. The listed values are limited by the gear drive structure, therefore, they will not change as the speed decreases, which is normally the case when bearings are the limit reference.

6.5 Radial und Axial Belastungen

In der Tabelle werden die Werte der auf jedem einzelnen Abtrieb zulässigen Radial- und Axialbelastungen in N angegeben. Hinsichtlich der radialen Belastung F_{r2} wird von einem Abstand vom Anschlag der Hohlwelle ausgegangen, der dem Wert des Durchmessers entspricht. Die angegebenen Werte werden durch die Struktur des Getriebes beschränkt und verändern sich daher bei Reduzierung der Drehzahl nicht. Dies ist normalerweise dann der Fall, wenn der Grenzwert sich auf die Lager bezieht.

Tipo Size Typ	135	150	170	230
F_{r2} [N]	1200	1900	1700	3000
F_{a2} [N]	600	950	850	1500
